

## Tool Summary:

# --MobiTrain – Mobile Trainer Manual on SmartPhone--

## Which values are generated?

### For beneficiaries:

- Facilitators of experiential learning methods (CEFE) always have access to the essential learning units and a collection of energisers, added by a summary of adult learning theory and facilitation rules.
- They can easily select suitable session descriptions and refresh their memory on how to deliver exercises.

### For projects:

- Projects can provide the manual to graduates of a Training of Trainers avoiding printouts.
- USB-sticks are not needed any longer and spreading of computer viruses is avoided.
- The App is personalised, and the trainer can get updates anytime.

## How it works?

The App is programmed, maintained and kept posted by CEFE International. The facilitator always has an updated version with a growing number of learning units. It is highly visualised using: graphs; photos of applied best practice models for flip charts, result charts, exercise rules; video clips.

### MobiTrain provides:

- A guide to modern adult learning including the different experiential learning methods, communication with participants and hints for presentation.
- The collection of essential learning units (exercises), with a growing part being presented also by video clips.
- Tool for selecting exercises according to learning objectives.
- Links between different exercises.
- Energisers, increasingly as video clips.
- An orientation on visualisation of rules, result charts, structured processing examples.
- Material that can be used as handouts for participants.
- Hints for preparation of training events.
- Impact monitoring guideline.
- Examples of thematic modules with course programs.

## What is needed?:

Training material exists and needs to be transformed in a visual way, suitable for mobile phones. A partner or programme is looked for to accelerate visualisation and preparation of a huge volume of information.
